

CHECKLIST OF ALASKA BIRDS

32nd edition—2026

As of 1 Jan 2026 the list of avian taxa known in Alaska included 551 species in 67 families and 21 orders. Founded on archived specimens, the Alaska checklist includes species known in Alaska from specimens and/or archived photo evidence. Phylogenetic sequence, limits of orders, families, and genera, and English and scientific names of species follow the *Checklist of the avian diversity of Alaska* (Withrow, J. J., D. D. Gibson, and K. Winker. 2026. Bulletin of the American Ornithologists Union No. 1.1; <https://shorturl.at/GsxNL>). In conjunction with the University of Alaska Museum, the Alaska Bird Records Committee recommends species additions and changes in status based on assessments of birds reported in Alaska. An appended ‘unsubstantiated’ list comprises an additional 15 species attributed to Alaska, without specimen or photo substantiation.

KEY TO SYMBOLS:

- ✓ RARE (Annual or probably annual in small numbers; most such species occur at the perimeter of Alaska, in season; a few are scarce residents)
- ★ CASUAL (Not annual; these species are beyond the periphery of annual range, but recur in Alaska at irregular intervals, usually in seasonal and regional patterns)
- ⊛ ACCIDENTAL (One or two Alaska records, or none in last 30 years)
